ADSL Microfilter

The DSL Microfilter is for use in plug and go (wires only) DSL services now being marketed by Internet Service Providers in the UK. Designed to plug into a standard UK telephone socket it provides a filtered BT socket for telephone connection and a straight through RJ11 port for DSL modem connection. The excellent performance characteristics of the filter enable reliable simultaneous transmission of voice and DSL signals without any apparent loss of speech quality or data corruption to the end user with up to 4 telephony devices connected to the line.

Designed and manufactured in the UK, it has been verified by BT to the requirements of SIN 346 Issue 2.2 and is considered suitable by BT for direct connection to the UK telephone network.

Key Features

- Moulded from V0 rated material colour matched to BT 01P white.
- Tested by BT to SIN 346 Iss 2.2
- No impairment in performance when used in multi filter topology.
- Compatible with Calling Line Identification working
- CE Marked BS EN 55022
