

ADSL Centralised Filter (3 way IDC)

The Centralised DSL Filter is designed to plug into a standard NTE5 residential telephone outlet. It provides a straight through connection for DSL modem connection via a shuttered RJ45 socket as well as a filtered telephone socket and filtered 3 way IDC connector for onward connection of extension telephones. With the centralised filter system, the filter becomes an integral part of the wall socket providing a tidy looking fixture with the added benefit of negating the need for subsequent extension sockets to have microfilters plugged into them.

Features

- Moulded from V0 rated material colour matched to BT 01P white
- Tested to SIN 346 Issue 2.3
- Compatible with calling line identification working

Benefits

- Filter can not be easily removed – anti theft proof
- Aesthetically pleasing.
